

Testimonials

Superair have been maintaining my fleet of aircraft for over 25 years now. I am totally satisfied with their comprehensive service. I operate a diverse range of aircraft and it is imperative to my business that I have the availability of a first class maintenance facility to keep our aircraft airworthy. They are also mindful of the issues their clients face and therefore take into consideration the need to keep costs for maintenance at an acceptable level.

Brad Edwards
Owner/Operator, Edwards Aviation
Armidale NSW

I have been utilizing Superair's maintenance facility for my own fleet of aircraft for over 3 years now. Their service has far exceeded my expectations. Their knowledge and willingness to help is second to none. They pride themselves on maintaining a first rate service which is also as cost effective for their clients as possible.

Stewart Hignett
Owner/Chief Flight Instructor,
New England Flight Training
Armidale NSW

I have had my aircraft maintained by Superair since 1976. Our association still continues to this day. I have always been more than happy with the quality and workmanship of the engineering staff. If at any time a problem arises the management listen to my concerns and rectify without hesitation. I have always been more than happy with the attitude and service I have received from the Superair team.

Geoff Swilks
GC Foundry

SUPERAIR

Service Maintenance Division

Superair Australia was established in 1964 by a group of graziers located in the Armidale area.

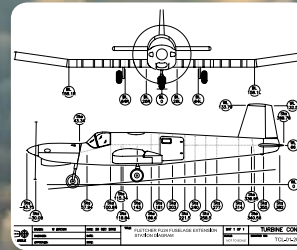

The General Aviation maintenance division of Superair has been servicing the aviation community for over 40 years.

We are a fully equipped workshop with Civil Aviation Safety Authority of Australia approval number 2200.

Superair employs licensed aircraft maintenance engineers, aircraft maintenance engineers, trade qualified sheet metal workers, trade qualified aircraft spray painters as well as licensed aircraft welders. This gives us the ability to cover all forms of maintenance from routine periodic inspection to major rebuilds and refurbishments on both piston engine & turbine aircraft.

We have a fully equipped piston engine overhaul facility catering for all piston engines both turbo and normally aspirated varieties. This facility also has Lycoming and Continental fuel injection and carburettor overhaul and servicing. To complement the above we also have an electrical component overhaul and service facility.

In our purpose built hangar, Superair caters for all GA aircraft, both piston and turbine & twin engine are able to be professionally given a new lease of life.

Following below are a list of tasks we are able to perform:

- Routine periodic inspections
- Pre purchase inspections with comprehensive written details & findings
- Major repairs and rebuilds, Insurance work a specialty
- Certificate of Airworthiness Inspection
- Sourcing and importing of aircraft with written reports and costing
- Sheet metal repairs and modifications
- Aircraft refurbishment, including complete repainting, interior and instruments / avionics refit. Leather interiors a specialty.
- Modification & designs, liaising with CAR 35 approval holders.
- Turbine engine hot section inspections
- PT 6 series engines specialists
- Damaged aircraft recovery specialists
- CASA approved Licensed Aircraft Welding Service
- Distributor for Electronics International instruments.
- Installations of GPS systems
- Aircraft control cable manufacture in house.
- Hydraulic hose manufacture in house.
- Fitting and machining service in house.
- Propeller and engine both piston and turbine Dynamic Balancing and Spectrum analysis utilizing the latest MICRO VIBE computer system.
- installation and maintenance of MVP-50T engine monitoring systems for both piston and turbine engines.
